

Learn More: Interactive Displays

Using an Interactive display in your classroom helps educators present, and helps students get involved, with learning content shown on high quality, high definition (HD) screens.

Most schools have interactive whiteboards & projectors in the classroom but these new touchscreen displays bring the classroom into the HD era and prove to be more cost-effective, with a lower overall total cost of ownership and lower energy use.

Interactive displays are integrated units, so there is no need to calibrate once installed, with no moving parts or consumables to replace. There's no set up time needed so you can begin teaching from the screen as soon as it's on.

The economic benefits to using interactive displays are clear to see:

- Saves money with backlight life that last 15x longer than typical projectors, whose lamps start fading when it's switched on.
- No costly lamps to replace or filters to clean
- Lower energy consumption than traditional solutions
- No costly preventative maintenance contracts needed

We challenge you to take a look at one of your classroom projectors and compare the image to your TV at home. Choose these displays and it's possible to have that TV quality in your classrooms!

After all, today's pupils are digital natives and used to HD images from TV, Games, Consoles, Tablet Devices and smart phones, why should they have to compromise at school?

Regular problems faced by students and teachers with using outdated interactive whiteboards and projectors can be resolved with the interactive displays:

- Retain classroom engagement with full HD quality images that don't fade over time.
- Prevent headaches and visual strain from glare (as caused by ceiling mounted projectors): teachers and students can use LCD or LED screens with significantly less stress to the senses.
- Improve safety in the classroom, with no trailing wires to fall over
- Interactive displays have toughened safety glass to survive the rigors of tough classroom environments
- Highly flexible: available in fixed or mobile options, height adjustable with no trailing wires & one-time calibration.

We believe the latest Interactive displays are the perfect presentation solution for classrooms today! They are highly cost effective, reliable, maintenance free and tough enough to withstand daily school life. We will review your class needs with a free classroom display healthcheck, and advice on the best interactive display solution with technical considerations aimed at enhancing your educational needs. We offer full setup, hands-on training and on-going support for you to make the most of your interactive display in your classroom.
